# ArkallyGPS SYSTEM

## GPS And Remotely Mangement

The innovative, advanced, and automated GPS device allows users to monitor their watercraft's location, security, and management. It has been designed with the latest technologies and strategies to achieve outstanding performance and precise real-time interaction with your watercraft. You can also control watercraft remotely along with new automated features provided by ArkallyGPS Systems.

Intelligent Distance Control (IDC) system reduces the risk of accidents and collisions. It enables precise tracking of all watercraft operations, decreases employee or guest misuse, and tracks fuel consumption to maximize business income. Track an unlimited number of personal watercraft from any location in the world.

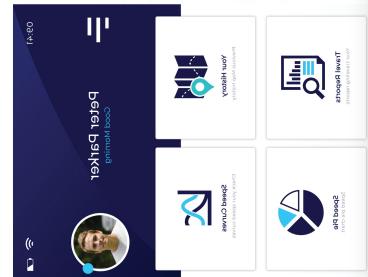

## ArkallyGPS Safety and Security

### Watercraft Controls and Recovery

We built the device to meet the challenges of safety and security. Now protect your watercraft using the Geofence feature that provides real-time location and remote power management to deal with an emergency. After installing this device, you are the only boss of your watercraft.

## How Arkally Controls using smart devices

A simple and user-friendly interface allows users to control their watercraft like a pro. Just install our application on smart devices and get complete control over the watercraft speed limit, engine control, GPS positions, and much more. The Arkally GPS application available on the both iOS and Android.

## ArkallyGPS Green Zone and IDC

### Green zones and accident safety

Mindblowing Green Zones feature provides a tensionless, secure, and safe ride environment for watercraft. You can draw Green Zones according to your need through the admin panel.

Green Zones are used to ride watercraft freely without any speed limit. The watercraft uses a warning beep to inform the rider location out of the green zone. Moreover, outside of the Green Zone, watercraft will automatically reduce speed to the set minimum limit. You will remotely control the watercraft in any suspicious situation.

## ArkallyGPS Data Management

### Cloud based database and analytics

We are introducing real-time interaction with the cloud-based database to access intelligently organized data. That provides you with the complete information you need to run your watercraft business professionally.

Your data will be available at your fingertips anywhere in the globe. You will enjoy the experience of ArkallyGPS Systems.

## How ArkallyGPS Works

### Smart Devices And Controls

## Management Features

### Remotely Controllable with professional UI

#### Time Duration Management

You can track the duration of ride rent time. You can take action accordingly.

#### Intelligent Distance Control (IDC)
